dotnetfx35 full. dotnetfx3 x32 free. dotnetfx40 full x64 exe. dotnetfx4 0 full x86 exe. dotnetfx exe torrent fulltorrent. dotnetfx40 client x86 1 exe. Category:Microsoft softwareQ: How can I return the data in a dojo.store.JsonRestStore? Is it possible to return data to my Store? I can't seem to find anything on it: I'm looking for something like the data from: A: Assuming you are writing store that's AJAX based (i.e. does not fetch data from an XML or JSON file), you will want to implement the asynchronous loading of your data. There's a good tutorial on this here: package main import ("fmt" "io" "log" "net/http" "os" "path/filepath" "strings" "github.com/rs/zerolog" "golang.org/x/net/context") func Index(w io.Writer, req *http.Request) { log.Printf("index: %s", req.URL.Path) index, err := NewIndex() if err != nil { log.Fatal(err) } if req.Method != "GET" { if err = index.Set(req.URL.Path, req); err != nil { log.Fatal(err) } if err = index.Save(); err != nil { log.Fatal(err) } log.Println("index saved") } func Detail(w io.Writer, req *http.Request) { log.Printf("index: %s", req.URL.Path) index, err := NewIndex() if err != nil { log.Fatal(err) } if req.Method != "GET" { if err = index.Set(req.URL.Path, req); err != nil { log.Fatal(err) } if err = index.Save(); err != nil { log.Fatal(err) } log.Println("index saved") }
